SUMMARY OF CHANGES

(End of Summary of Changes)

The following items are applicable to this modification:NOTES

The purpose of this amendment is to provide answers to questions submitted by prospective contractors:

The following questions and answers are provided for clarification.

Question: Is the rig intended to run more than one of the subsystems at a time? For example, would there be a test running on the motor test circuit at the same time as there is a load on the main system pressure circuit? Also, would the auxiliary pressure circuit be used at the same time as the main system pressure circuit? I suspect the answer is yes to all, but need to be sure because if all systems can be used simultaneously, the heat exchanger and closed loop cooling systems are much, much larger than if only one system runs at a time.

Answer: The high pressure circuit is not used at the same time as the main pressure. However, the main pressure and the motor to rotating the pump are used at the same time.

2. All other terms and conditions remain unchanged.
